Company Profile

StrategyDB is already several years old, launched by Wall Street veteran trader and strategy developer Matthew Goss Cimmino in 2009. As founder of StrategyDB.com, Mr. Cimmino has used his extensive career on the trading and financial technologies side to build this simple yet powerful decision support tool for the trading and professional investment community.

Market Wisdom

Trading is a difficult business. StrategyDB believes that searching for trading strategy information should be easy, but still powerful. Transferring trading strategy information into analytics or actionable trading endeavors should be equally as simple. Traders should be able to access better data mining, and more trading strategy intelligence! Finally, StrategyDB saves the subscriber 100's of hours in back testing.

Overview

StrategyDB's flagship product, Performance Matrix, is a database driven Web application that is powerful, yet easy to use. The product's multi-asset class database contains tens of thousands of hypothetical back-tests results, for dozens of technical analysis focused strategies that are already well known to the investment and trading community; MA Crossovers, MACD, RSI, and more!

Performance Matrix functionality includes hypothetical back-tests dynamically append with new results in real-time, whenever new strategy positions change.

Key Features

- Hypothetical Back-Tests for Dozens of Technical Strategies
- Metrics that update in Real-Time
- Search, Sort, Export to Excel Pivot Tables, Data Filters
- Customizable Templates
- Multi Asset-Class - Forex, Futures, Stocks
- Multi Bar Interval – Intra-Day, EOD

Advanced Features

The Performance Matrix app updates regularly with new performance summaries. An enormous universe of multi-asset class symbols, bar intervals, and strategies, are monitored in real-time, appending new performance metrics to the database whenever new trades are made.

Performance Summaries

StrategyDB's performance summaries are derived from technical analysis based strategies, although fundamental and quantitative strategies may be added in the near future. Database performance summaries contain 16 columns that each describes the underlying strategy's characteristics.

StrategyDB's strategy code, used to generate performance summaries is simple and open source. Support is offered to all subscribers interested in replicating database output on their trading platforms.
